Fresh Fruits **Orange**

Kinnow

Kinnow is a popular variety of mandarin orange primarily grown in Pakistan and India. It is known for its bright orange color and easy-to-peel skin.

Malta

Malta oranges, often referred to as "Blood Oranges," are distinguished by their deep red flesh and unique flavor profile.

Sangtra

Sangtra is a term often used interchangeably with "orange" in South Asia, but it can also refer to a specific type of sweet orange.

Fruter

The term "Fruter" isn't a specific variety but could refer to a fruitier or more flavorful type of orange. This might be used to describe oranges that are particularly sweet or aromatic.

Quality Export Mangoes **From Pakistan**

A mango is a sweet tropical fruit, and it's also the name of the trees on which the fruit grows. Ripe mangoes are juicy, fleshy, and delicious. Like peaches and plums, mangoes have an inedible pit at the center. Unlike these other fruits, the skin of a mango is very tough and also inedible. It is a very juicy, pulpy and luscious fruit. Ripe mangoes can either be consumed raw or in the form of salad, juice, jams, milkshake or pickles. Mango is a rich source of various vitamins and minerals.

anjal

Pink **Salt**

Pink salt, often referred to as Himalayan pink salt, is a type of rock salt that is mined from the Punjab region of Pakistan, near the Himalayas. This salt is known for its distinctive pink color, which comes from trace minerals such as magnesium, potassium, and calcium, along with small amounts of iron oxide (rust).

Pink salt is used as a seasoning in cooking and baking. Its distinctive color and flavor make it popular for finishing dishes, enhancing both the visual appeal and taste. It can be used in place of regular table salt and is often found in gourmet salt blends.

Cattle Feed **livestock farming**

Cattle feed is a vital component of livestock farming, designed to provide essential nutrients that support the health, growth, and productivity of cattle. The formulation of cattle feed involves a careful balance of ingredients to ensure optimal nutrition for different stages of cattle development.

Rhodes Grass

Rhodes grass (*Chloris gayana* Kunth) is primarily a useful forage of moderate to high quality. It is grazed, cut for hay or used as deferred feed but it is not suitable for silage. It can form pure stands or is sown with other grasses or legumes. Many cultivars have been developed in order to suit different cultivation conditions or end uses, such as early, late and very late flowering cultivars.

Chloris gayana originated from Africa and is now widespread in tropical and subtropical areas worldwide. It was introduced into India, Pakistan, Australia and the USA. *Chloris gayana* can be mixed with oats or wheat that provide protection during winter, or it can be broadcasted in maize, sorghum or cotton crops.

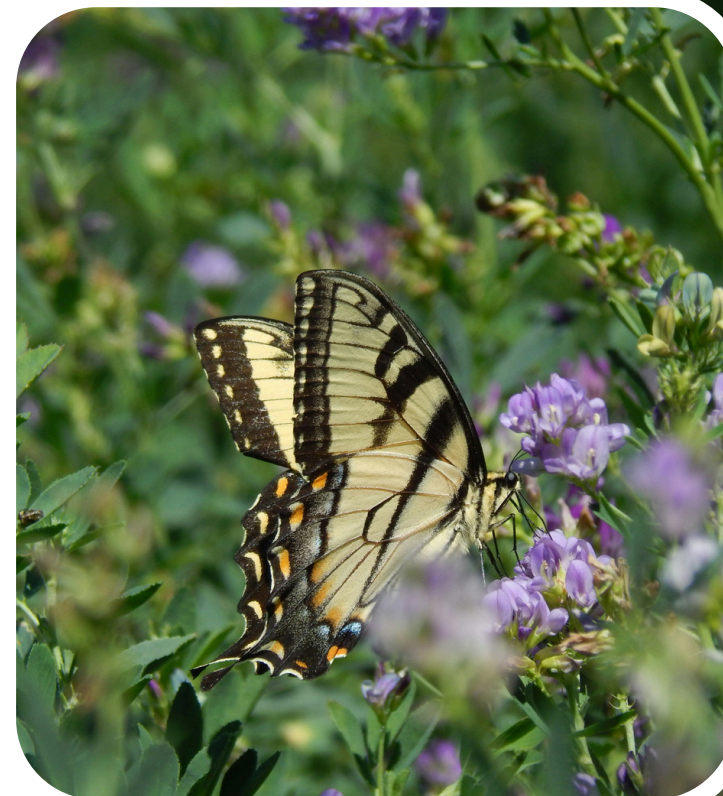

Alfalfa

Alfalfa (*Medicago sativa*) is a highly nutritious and versatile forage crop that is widely used in livestock feed due to its rich nutrient profile. Known as the "Queen of Forages," alfalfa is particularly valued for its high protein content, vitamins, and minerals, making it an essential component of cattle feed and other livestock diets.

Nutritional Benefits of Alfalfa

- Alfalfa is rich in protein, which is crucial for the growth, repair, and maintenance of body tissues in livestock.
- It typically contains 15-20% crude protein, depending on the stage of harvest and growing conditions.
- Rich in Vitamins and Minerals:
 - Alfalfa is an excellent source of vitamins A, D, E, and K.
 - It provides essential minerals such as calcium, magnesium, potassium, and iron.
- Alfalfa contains a significant amount of fiber, which aids in digestion and promotes gut health in ruminants.

Wheat Straw **Dry Stalks**

The value of the straw with the wheat harvest is of a very significant importance for livestock farms using straw as part of their feed rations. Baling and selling wheat straw has become a more common practice keeping in view the varied utilization of wheat straw. We collect nutrient rich wheat straw from the fields across Pakistan and manage to fulfill the need of national and global clients alike. We ensure to preserve and preserve the nutritional value of wheat straw at every stage and step. Although the environmental conditions have huge impact on the actual nutrient content that vary from region to region. Lab tests of plant samples are regularly undertaken to calculate and maintain the exact nutritional values.

high-moisture fodder made

Corn Silage

Corn silage is a type of high-moisture fodder made from the whole corn plant, including the stalk, leaves, and ears. It is commonly used as livestock feed, particularly for dairy cows, beef cattle, and other ruminants. Corn silage is highly valued for its nutritional content and is a staple in many agricultural operations.

Use in Livestock Nutrition

Corn silage is typically included as a significant portion of the diet for dairy and beef cattle due to its energy-rich content. It provides the necessary nutrients to support milk production, growth, and overall animal health. When balanced with other forages, grains, and supplements, corn silage can form a complete and nutritious diet for livestock.
